# Practice Safely with TrollBags & TrollBarriers

*TrollDental's award-winning line of barrier products fit easily and securely on most sensors, cartridges, syringes, and composite guns for ultimate infection control*

**B**link and you'll miss it! The latest advances in dentistry come and go with lightning speed, but one thing that never changes is the industry's focus on infection control. TrollDental has led the way for decades with a growing product line of protective sleeves for infection control. These strong, multi-purpose, super-elastic sleeves maintain a secure fit to most equipment and provide a comfortable shield for patients.

One practice that has relied on TrollDental's protective sleeves for many years to keep patients and staff safe is Agnini Family Dental in Lakeland, FL.

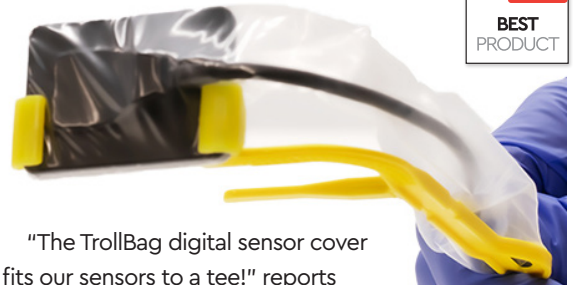

"We have always taken infection control very seriously—and this goes back to the days even before the COVID-19 pandemic," said Tanya Santana-Irizarry, who is a dental assistant at the Central Florida practice. "I am proud to say that infection control is an important aspect in our daily workflow," she continued.

One product the staff at Agnini Family Dental uses all day, every day, is the TrollBag Digital Sensor Cover. Garnering a *DPS* Best Product award for its simple application, easy removal, and positive patient reaction during x-ray procedures, the sensor cover is soft yet strong and has no sharp seams that can cut into a patient's mouth. The sensor cover is tasteless, making the experience more agreeable for patients.

Tanya Santana-Irizarry

**"Everyone here values our patients' safety, along with our own, and these protective sleeves make that possible."**

"The TrollBag digital sensor cover fits our sensors to a tee!" reports Santana-Irizarry. "They fit nice and snug, and that good fit allows us to place the sensors properly and securely," she continued.

**Easy Application and Removal**

Here's how it works: the cover's innovative elastic material is specially designed to create friction between the claw of the sensor holder and the actual sensor, resulting in no extra volume around the sensor and a more secure fit of the sensor in the claw.

The sleeve is easy to remove with simple tear sides, which means dental staff don't have to pull on the sensor cord in order to remove the bag.

"Everyone here values our patients' safety, along with our own, and these protective sleeves make that possible," Santana-Irizarry added.

**Meet the Rest of the Family!**

In addition to sensor covers, TrollDental also manufactures TrollBag for Cartridges and TrollBag for Syringes, respectively designed to fit most cartridges and syringes. A fourth member of the product line is the TrollBarrier for Composite Gun, a *DPS* Recommended product and a flexible, yet strong cover for most composite guns that minimizes the need to autoclave the gun between patients.
